4 December 1969

**MEMORANDUM FOR: ID/ORD**

**SUBJECT : Requirement TIV-1-69, Adhesive Device  
For [ ] Attachment**

1. The subject requirement has been discussed with TSD and ORD project officers and ORD test work involving adhesives and suction devices has been coordinated with TSD. The updating of this requirement is believed in order and to this end it is requested that ORD forward to TSD/D&E pertinent development and/or test reports. This work should be reviewed in detail before a meaningful TSD input to further work can be made.

2. It can be generally stated at this time that this work is not considered by TSD as high priority. There have not been operations involving [ ] for years and none have been contemplated to our knowledge. However, the ORD work has extended the [ ] attachment capability to [ ] [ ] for which there was previously no existing mechanism. It is intended that after review of the ORD technical reports, that a proper emphasis and priority can be assigned to any on-going effort.
